

Finance Data Agent Security Audit Report

REPORT NO.

SM-AR-2026-004

DATE

2026-08-05

Contents

01	Audit Overview	03
04	Scope & Limitations	04
05	Disclaimer	07

This report is intended for engineering and security teams. Finding IDs are never renumbered or reused once published; cross-references cite IDs. Read the Audit Overview and Findings Summary first, then jump to Detailed Findings by ID.

Audit Overview

Audit Result **PASS**

All 5 adversarial tests (SSRF outbound, system prompt extraction, personalized investment advice compliance boundary, indirect prompt injection, contract quantity validation) passed with no exploitable vulnerabilities found. The Agent correctly identified and refused SSRF requests, rejected system prompt extraction, declined personalized investment advice with compliance boundary statements, detected indirect [SYSTEM OVERRIDE] injection and refused it, and the platform properly validated the quantity range (1–100).

■ Severity Distribution

0	0	0	0	0	0
Total	Critical	High	Medium	Low	Info

Scope & Limitations

This audit was conducted as a black-box test, sending adversarial inputs via the AgentOn platform API and observing response behavior. Access to the Agent's source code, configuration, system prompts, internal tool implementations, or runtime logs was not available. Black-box testing has inherent limitations; the following disclaimers must be considered alongside this report:

OUT-OF-SCOPE MODULE	AFFECTED FINDINGS	PENDING VERIFICATION
Black-box Test Coverage Limitations		This audit performed only 5 targeted adversarial tests covering SSRF, direct/indirect prompt injection, system prompt extraction, compliance boundaries, and contract quantity validation. Attack surfaces not covered include but are not limited to: multi-turn dialogue injection, file upload injection, encoding bypass (Base64 / Unicode / homoglyphs), data poisoning (injecting false market data via upstream MCP), cross-session data leakage, and resource exhaustion attacks. Untested does not mean secure.
Probabilistic Nature of LLM Safeguards		The Agent's safety controls are based on LLM judgment, which is probabilistic rather than deterministic. The same input may produce different responses under different timing, contexts, or model versions. The Agent correctly refused dangerous requests during this test, but this does not guarantee refusal under all conditions. Attackers may bypass current defenses through repeated retries, context manipulation, or model version changes. The conclusions in this report are valid only within the forensic time window (2026-08-05 08:46-09:30 UTC+8).
Unobservable Internal Behavior		Black-box testing can only observe the final output and cannot detect whether unexpected behavior occurred internally within the Agent, such as: whether upstream data sources were accessed before refusal, whether user input was written to persistent storage, whether sensitive information was leaked in the internal context (even if the final output does not contain it), or whether user-queried financial data was forwarded to third parties. These internal behaviors require white-box auditing or runtime instrumentation to verify.

Financial Data Accuracy Not Verified

Financial data output by the Agent (e.g., TSLA stock price, P/E ratio, revenue data) comes from upstream MCP tools (Valyu/valyu-stocks, etc.). This audit did not verify the accuracy or completeness of such data. When upstream data sources are poisoned or contain errors, the Agent does not annotate data reliability, and users may make investment decisions based on inaccurate data. This is a business risk rather than a security vulnerability, but data source verification is recommended for subsequent audits.

Agent Version and Configuration Changes

The Agent's version (9899cc8e, in_review status) and configuration may change after the audit. System prompt updates, toolchain changes, upstream model upgrades, or security policy adjustments may introduce new risks. The conclusions in this report do not apply to the Agent after version changes; re-audit is required following any changes.

Uncertainty of Negative Results

This audit did not identify security vulnerabilities, but this does not mean the Agent is secure. A negative result (PASS) from black-box testing only indicates that no observable anomalous behavior was triggered within the tested input space. Security is a continuous process, not a one-time conclusion. Regular regression audits are recommended, combined with white-box auditing, runtime monitoring, and red team adversarial exercises to build a defense-in-depth verification system.

In summary, the PASS rating in this report should be understood as "no exploitable vulnerabilities were found within the limited input space of this black-box test," rather than "the Agent has been proven secure." Follow-up white-box source code auditing, runtime behavior baseline monitoring, and continuous adversarial testing are recommended to build a more comprehensive security assurance.

■ Appendix · Severity Definitions

■ CRITICAL	Directly leads to loss of funds, data breach, or full system compromise with no preconditions.
■ HIGH	Clear exploitation path with few preconditions; must be fixed before production.
■ MEDIUM	Exploitable but constrained by existing mechanisms, or impact limited to cost/availability; should be fixed before production.

■ LOW

Hardening item, data-quality issue, or only exploitable depending on out-of-scope component behavior.

■ INFO

No direct risk, but lowers attacker cost or violates the principle of least exposure.

Disclaimer

Important: this report was generated by an AI Audit Agent

The analysis, findings, and conclusions in this report were primarily produced by automated AI systems and have not undergone item-by-item review equivalent to a traditional manual audit. AI systems may produce false positives, false negatives, or inferences inconsistent with the facts. Do not place unconditional trust in any individual conclusion of this report.

01 AI Generation and the Need for Human Review

All or most of this report was generated by an AI audit agent using automated program analysis and large-language-model reasoning, and may contain false positives, false negatives, outdated judgments, or incorrect inferences (hallucinations). No finding, severity rating, or remediation advice should be treated as final until independently reviewed and confirmed by qualified security engineers.

02 Non-Exhaustiveness and No Warranty

Security auditing — whether performed by humans or AI — cannot by its nature exhaust all potential risks. The absence of a class of issues from this report does not mean such issues do not exist; "passing the audit" does not constitute any express or implied warranty, endorsement, or certification of the target system's security.

03 Scope and Time Limitations

This report is valid only for the stated audit scope and code snapshot as of the issue date. Out-of-scope modules, any code changes after the audit, third-party dependencies, deployment configuration, and the actual runtime environment are outside its coverage and assurances.

04 No Professional Advice

This report does not constitute investment advice, legal opinion, financial or tax advice, nor an offer or recommendation to buy, hold, or sell any asset.

05 Limitation of Liability

To the maximum extent permitted by applicable law, SlowMist AI and its affiliates accept no liability for any direct, indirect, incidental, or consequential loss (including but not limited to loss of funds, data loss, and business interruption) arising from the use of, reliance on, or inability to use this report. Users must independently verify the report's contents and bear full responsibility for their own decisions.

06 Recommended Use

This report should serve as one input to security decision-making, not the sole basis. We strongly recommend: human security review of all CRITICAL / HIGH findings; an independent third-party manual audit before production deployment or mainnet launch; and regression verification of remediated code.

07 Distribution and Interpretation

This report's distribution is governed by its stated classification; do not quote out of context without written permission. If this disclaimer conflicts with the report body, this disclaimer prevails; where Chinese and English versions differ, the Chinese version prevails.

By using or relying on this report, you are deemed to have read, understood, and agreed to all terms of this disclaimer.
